## CASE STUDY:

### MEDITE TRICOYA EXTREME IMPROVES HOSPITAL EXPERIENCE FOR CHILDREN

#### SCENARIO

As part of a strategy to improve the experience for young people visiting the hospital, the London NHS Trust wanted to create an external play area on the roof of The Royal London Hospital for Barts. Inspired by the idea of playing in an enchanted forest, far away from the rigours of gruelling hospital treatment. The play area required a highly durable and weather resistant overlay, suitable for a soft play covering to be applied.

#### SOLUTION

MEDITE TRICOYA EXTREME benefits from the latest advancements in acetylation technology, which naturally alters the wood's chemical structure so that it is not affected by water absorption. The versatile Extreme Durable MDF has incredible design capabilities making it the ideal choice for the unique application.

#### RESULT

MEDITE TRICOYA EXTREME was specified due to its dimensional stability. The play area includes a timber tree house, restful planted seating areas and a lamella canopy.
