

Exterior car displays at Royal Windsor Horse Show

The scenario: The Royal Windsor Horse Show is a 5 day event held in partnership with Land Rover and is the first major outdoor show on the equestrian calendar.

The solution: For this prestigious event, an exhibition stand was required by Land Rover to form the Queen's plinth. 80 sheets of extreme durable Medite Tricoya MDF were supplied by Timbmet, one of the UK's official distributors, to meet their requirements.

The result: Exhibitions are usually held inside or under cover, but the maiden appearance of this large stand was outside in the rain-sodden open air for a period of around three weeks, covering the time needed for construction, the duration of the show, and to dismantle. Despite the inclement weather conditions endured, the stand sections will be perfectly able, as planned, to be reused for future shows, including the Goodwood Festival of Speed. With only occasional cosmetic repair and standard maintenance, Land Rover will be able to reuse the stands for years to come, highlighting the possibilities of Medite Tricoya.

“ Medite Tricoya provides our customers with piece of mind, knowing the MDF won't swell even if any damage should occur and the MDF core be exposed - which in this case was pretty likely with the mud and the weather we've had! ”
