

## AN ACE PERFORMANCE FROM MEDITE TRICOYA

**THE SCENARIO:** The Newcastle Golf Driving Range in Northern Ireland is located close to the Irish Sea. Due to extensive weather exposure the existing plywood had come to the end of its life cycle prematurely and needed to be replaced with a material that provided extreme durable performance.

**THE SOLUTION:** Medite Tricoya was recommended for this project due to its extreme durable characteristics compared to traditional wood based materials. Medite Tricoya benefits from the latest advancements in acetylation technology, which naturally alters the wood's chemical structure so that water absorption does not affect it. This results in a more dimensionally stable MDF meaning it won't swell, shrink or decay, making it extremely durable. It is also incredibly versatile - it can be cut, coated, coloured, sanded, glued, machined and fastened.

**THE RESULT:** Medite Tricoya was specified, 30 sheets in a thickness of 18mm as the divider between each bay, giving the golfer extra privacy and safety to practice. "With a 50 year guarantee backed by independent BBA testing, we are confident that the Medite Tricoya bunkers dividers will last for years to come" explains Gareth, Store Manager at John Rodgers Builders Merchants.

"With a 50 year guarantee, we are confident that the Medite Tricoya bunker dividers will last for years to come under the strain of use and the external weather conditions."
